## Now Available: The Industry-Leading Bridgehill Fire Blanket Line

The Safety Inc Group is proud to announce that we now carry the full line of **Bridgehill Fire Blankets** — trusted globally for fast, effective fire isolation in high-risk environments.

Bridgehill's solutions are engineered to quickly smother flames and toxic smoke, providing critical containment when seconds matter most. From vehicle fires in parking structures and tunnels to lithium battery incidents in warehouses and labs, these professional-grade blankets help protect people, property, and operations.

The Car Fire Blanket line, including the Car Standard 2, is designed to isolate gasoline, diesel, hybrid, and electric vehicle fires. Ideal for first responders, fleet operators, and public facilities, it reduces damage and buys valuable time for emergency response.

For industrial environments, the Forklift Fire Blanket and Forklift Fire Safety Bundle deliver rapid deployment capabilities tailored to warehouses and logistics hubs, including lithium-ion powered equipment.

The Extreme and Lithium Fire Blankets address high-heat and battery-related incidents where traditional suppression methods may fall short, while the Heat Block Fire Blanket provides a powerful thermal barrier against radiant heat and wildfire exposure. Bridgehill expands our commitment to innovative, high-performance fire protection solutions.

**Contact us** today to learn how Bridgehill Fire Blankets can strengthen your fire preparedness strategy.

## Draeger - Polytron 6100

The Draeger Polytron 6100 EC WL is a cutting-edge wireless transmitter designed for continuous monitoring of toxic gases and oxygen. It boasts an intrinsically safe design and a SIL2 rating, making it ideal for use in hazardous environments. It is powered by an internal battery pack that can keep the transmitter running continuously for up to 24 months. This makes it a highly flexible and cost-effective option for plant expansions, upgrades, and new installation.

New Model!

## Dräger REGARD 3000 plus Controllers

The new and improved Draeger Regard® 3000 Plus delivers advanced, scalable gas detection control for industrial facilities that demand reliability and precision. Designed for flexibility, this modular control system supports a wide range of Draeger fixed gas detectors, making it ideal for manufacturing plants, utilities, energy operations, and processing facilities. The Regard 3000 Plus offers enhanced performance with improved processing capability, expanded communication options, and streamlined integration into existing safety systems. Its configurable inputs and outputs allow facilities to tailor alarm management, ventilation control, and emergency response protocols to site-specific risks.

## Gas Detector Calibration Services

iFacility Services offers expert calibration and repair services for portable and fixed gas detection instruments, ensuring compliance with ISO 17025 and factory specifications using NIST traceable standards. Calibration services are available for single-gas, multi-gas, and multi-gas with PID systems, with all work fully documented for accurate record-keeping. On-site services are provided across six New England states and Upstate New York, minimizing downtime with pre-scheduled visits. Instruments can also be shipped to a state-of-the-art calibration lab. Multi-year service contracts for regular calibration and maintenance are available to meet annual, quarterly, or monthly needs.

## Krohne Coriolis mass flowmeters

With over 30 years of experience, KROHNE has been at the forefront of developing innovative Coriolis meters. The OPTIMASS series offers a comprehensive range of high-performance, reliable Coriolis flow meters suitable for all relevant applications. Their engineers have created a family of meters that cater to a variety of needs, from small to large, and for both simple and challenging applications. These include handling highly corrosive media, multi-phase flows with varying gas fractions, complex flow conditions, high pressure, cryogenic temperatures and high temperatures.

## E2S - Warning Signals

E2S manufactures purpose-built warning signals, including horns and strobes, designed specifically for hazardous areas.

Key benefits include up to 80% less power draw, long-life LED strobes and beacons, self-synchronizing models without additional modules, and quick delivery from a Houston, TX facility.

Products are IECEx, ATEX, and SIL 2 rated, with no extra costs for voltage, lens colors, or enclosures, all backed by a 10-year warranty.
